

Project Case Studies

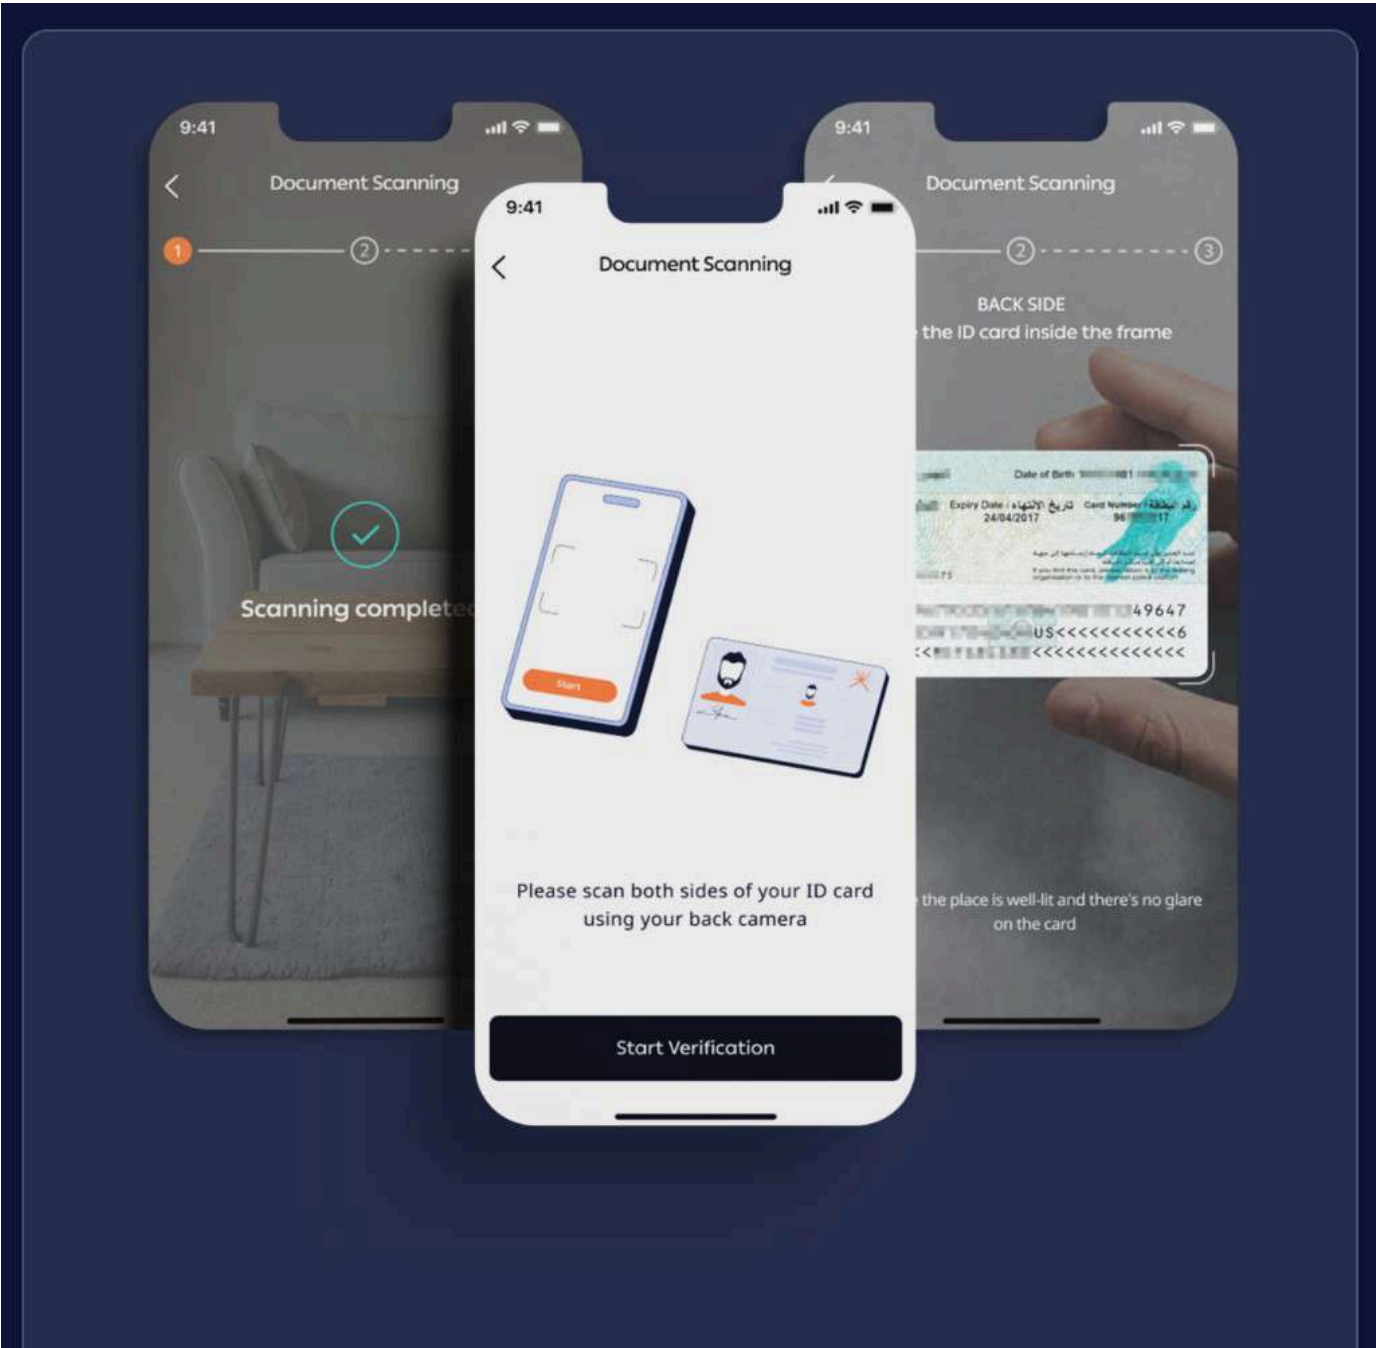

Corrected app-image mapping with relevant details and platform coverage

This portfolio showcases overall product delivery skills, correct app-to-image mapping where assets are available, and text-based case studies where screenshots cannot be shared.

We handle both Android and iOS product delivery depending on project needs.

Overify - Identity Verification

Identity Verification / Scanner • Mobile platforms handled for product delivery

Project Summary

Overify is an advanced identity verification app built by Nashid that simplifies and secures identity verification using artificial intelligence, NFC, OCR, MRZ reading, VIZ reading, passive and active liveness checks, and facial matching. It is designed to deliver a seamless scanner-based verification experience for modern digital onboarding.

Role

Handled mobile delivery for the product and supported secure verification flows, scanner experience, capture accuracy, and end-to-end identity verification features.

Technologies

OCR | NFC | AI-assisted verification | MRZ / VIZ data reading | Face matching | Liveness checks

Correct image mapped for this case study where a shareable asset was available.

Project Summary

WBRZ News provides late-breaking local news, weather, traffic, and sports for South Louisiana. The app includes live and 24-hour HD news delivery, trusted local reporting, strong visual storytelling, and coverage powered by the WBRZ News 2 team.

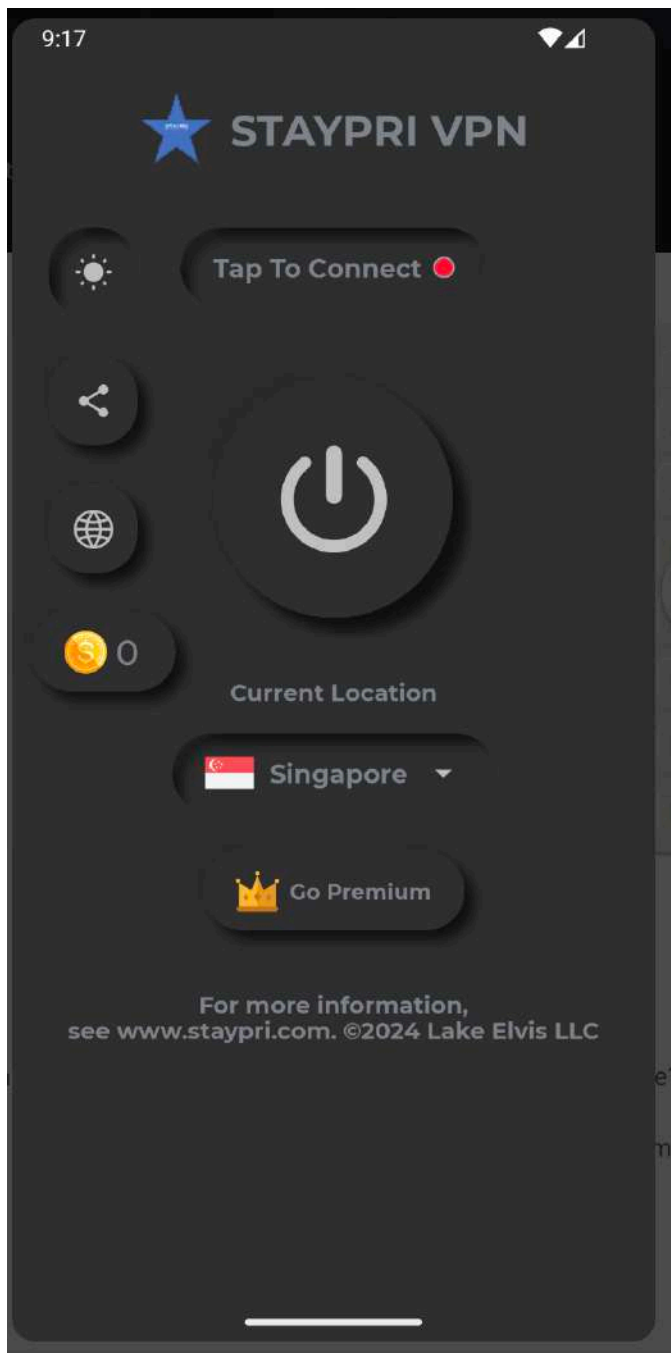

Role

Handled app delivery experience for a media-focused product with emphasis on content browsing, playback experience, and mobile news consumption flows.

Technologies

Streaming UI | Content browsing | News media experience | Playback-focused mobile UX

Correct image mapped for this case study where a shareable asset was available.

Project Summary

STAYPRI VPN protects online activity with AES-256-GCM encryption and a strict no-log policy. It is designed for office access, public WiFi protection, and reliable privacy with fast and secure VPN connectivity.

Role

Handled mobile product implementation and app experience around connection flow, server selection, premium screens, and privacy-focused UI.

Technologies

VPN UX | Security-first UI | Server selection flows | Premium upsell screens

Correct image mapped for this case study where a shareable asset was available.

No public screenshot included

No shareable project screenshot included in this document due to sharing restrictions.

Project Summary

An ad-free podcast app with interactive features, smooth navigation, strong compatibility with major podcasts, and episode reminders to help users never miss new content. The product focuses on clean playback experience and user-friendly discovery.

Role

Worked on product implementation and optimization for a better audio experience and smooth mobile performance.

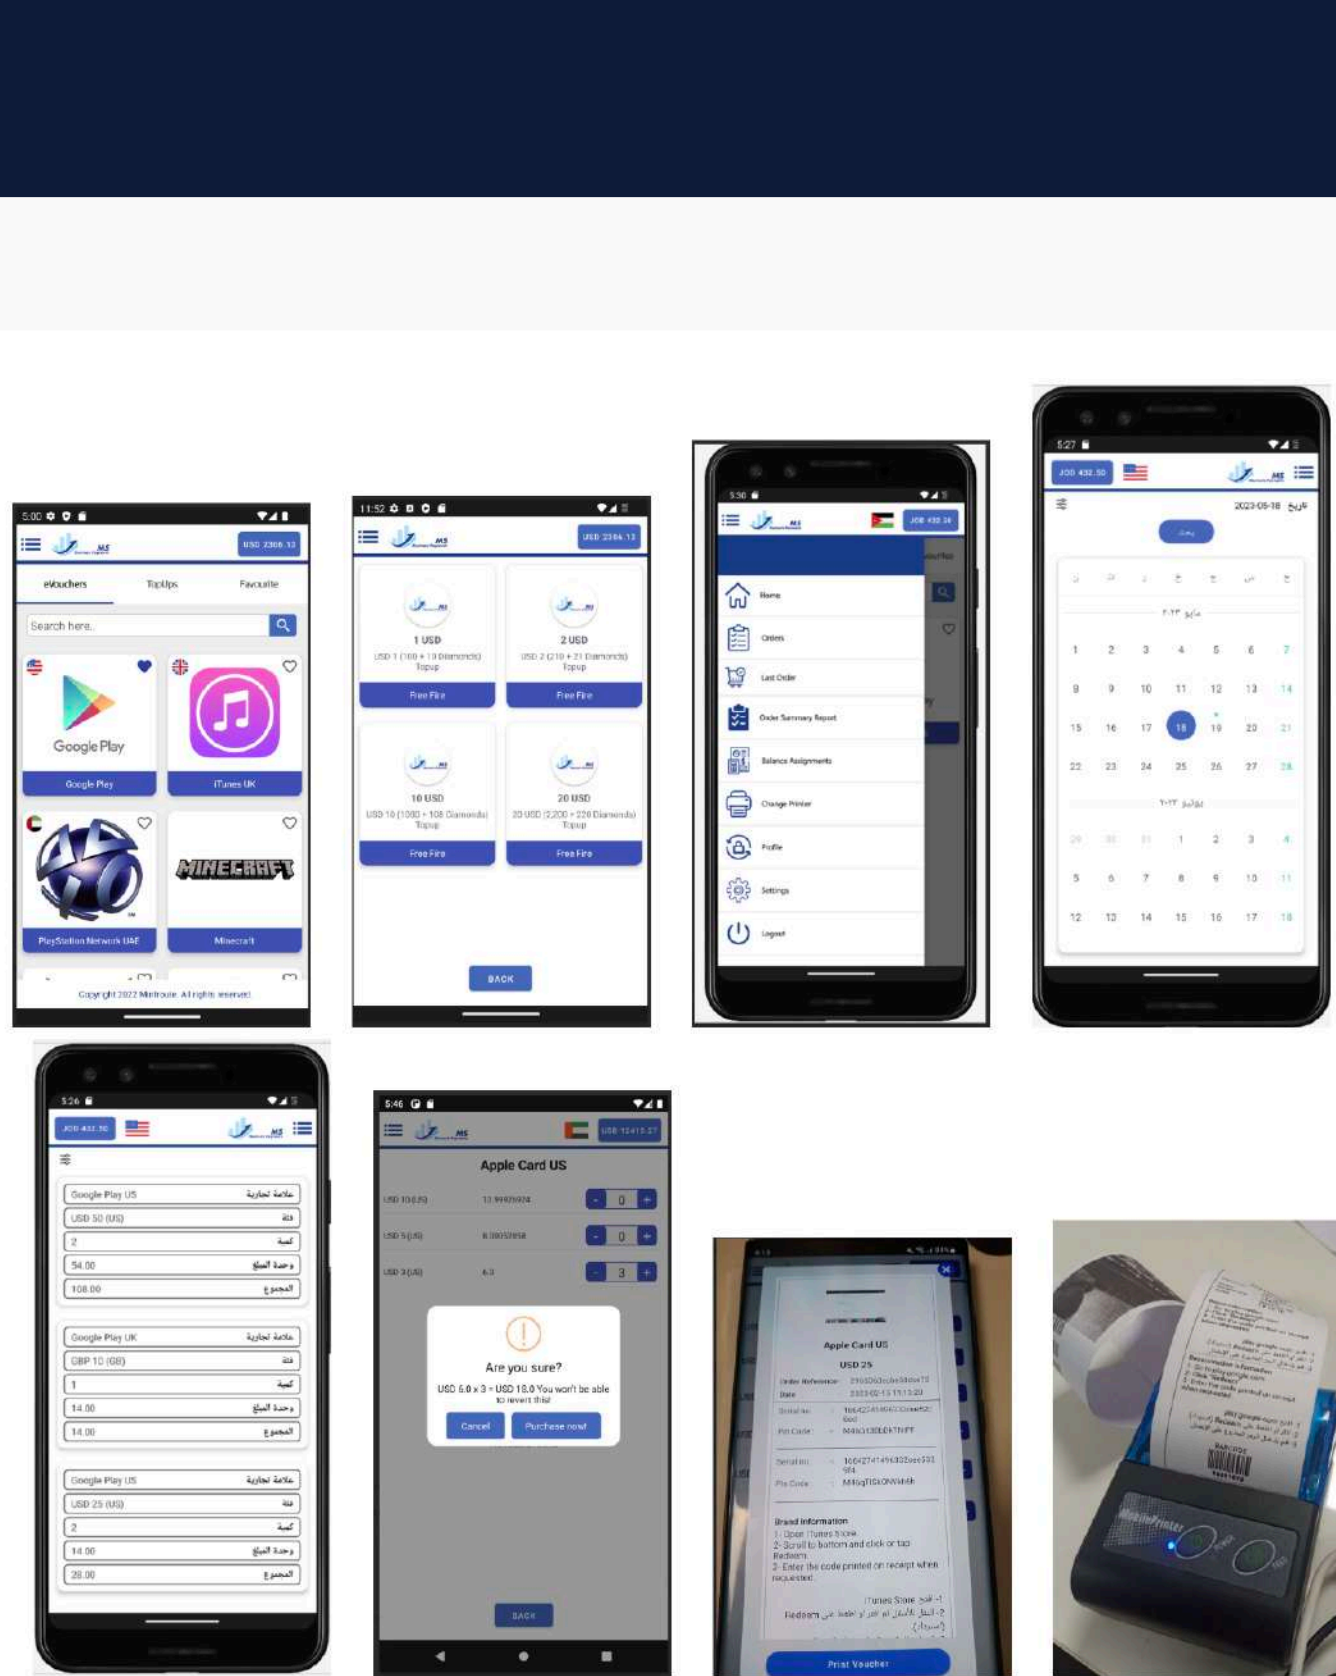

Technologies

Audio app UX | Episode reminders | User-friendly navigation | Mobile performance optimization

No shareable project screenshot included in this document due to sharing restrictions.

MintRoute - Gift Card Supplier

Retail / E-vouchers / Top-up • Mobile product delivery

Project Summary

This app helps retailers sell e-vouchers and gaming cards through on-demand top-up delivery. It supports product discovery, direct top-ups, real-time verification, personalized discounts, and nearby thermal printer receipt printing for merchant operations.

Role

Handled client collaboration, redesign work, Bluetooth thermal printer integration, and localization-related delivery needs.

Technologies

Java | Bluetooth thermal printer | Receipt printing | Retail top-up flows | Localization

Correct image mapped for this case study where a shareable asset was available.

No public screenshot included

Backend service project, so no public mobile screenshot is included here.

Project Summary

Worked with the Mondia team on reporting services, migrating endpoints from legacy technologies to modern Java Spring Boot solutions. The work improved performance, maintainability, scalability, and service security for a critical business module.

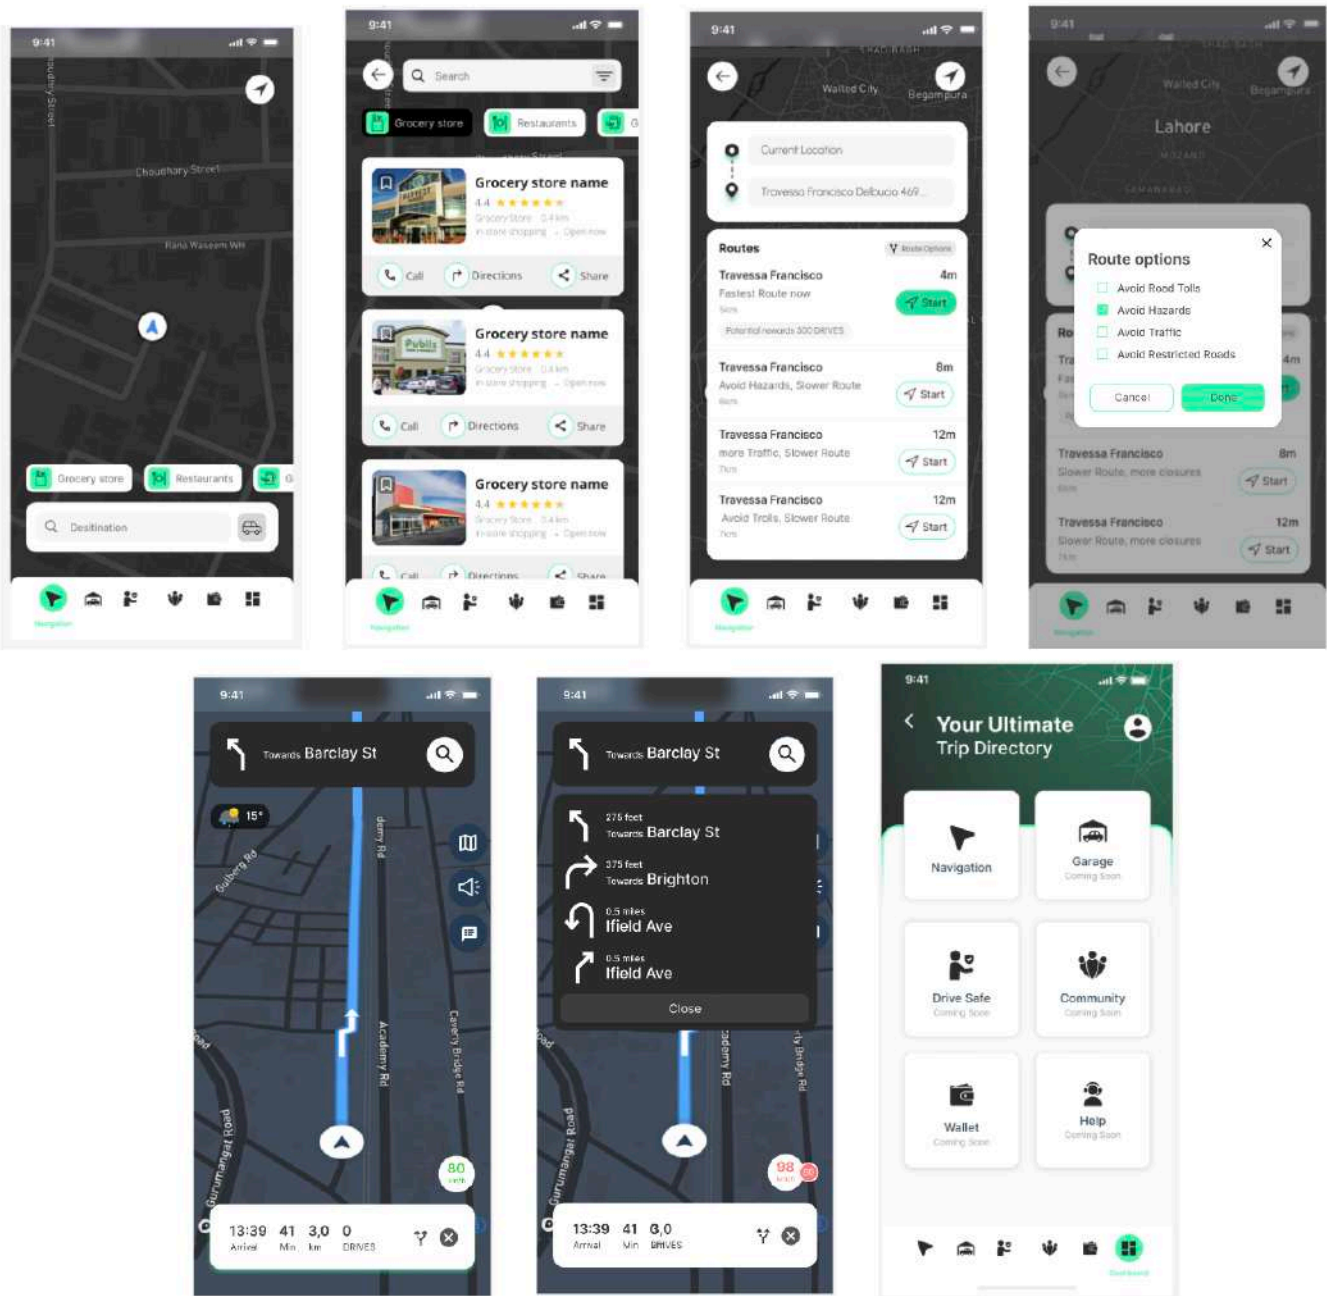

Role

As a Java Spring Boot Developer, collaborated on a critical reporting module and migrated legacy endpoints using modern backend architecture.

Technologies

Java | Spring Boot | Endpoint migration | Service modernization | Scalable backend APIs

Backend service project, so no public mobile screenshot is included here.

Project Summary

Drive Safe is built to improve safety on the road with Mapbox-based navigation, real-time traffic updates, and optimal route suggestions. The app focuses on practical route guidance and secure driving support.

Role

Handled mobile development for advanced map-based navigation flows and user safety-focused route experience.

Technologies

Mapbox | Navigation UX | Real-time traffic | Route optimization

Correct image mapped for this case study where a shareable asset was available.

No public screenshot included
No shareable screenshot included due to project-sharing restrictions.

Project Summary

A food ordering app built to deliver dishes quickly with a smooth and user-friendly mobile ordering experience. Users can place orders from anywhere and receive food conveniently at their doorstep.

Role

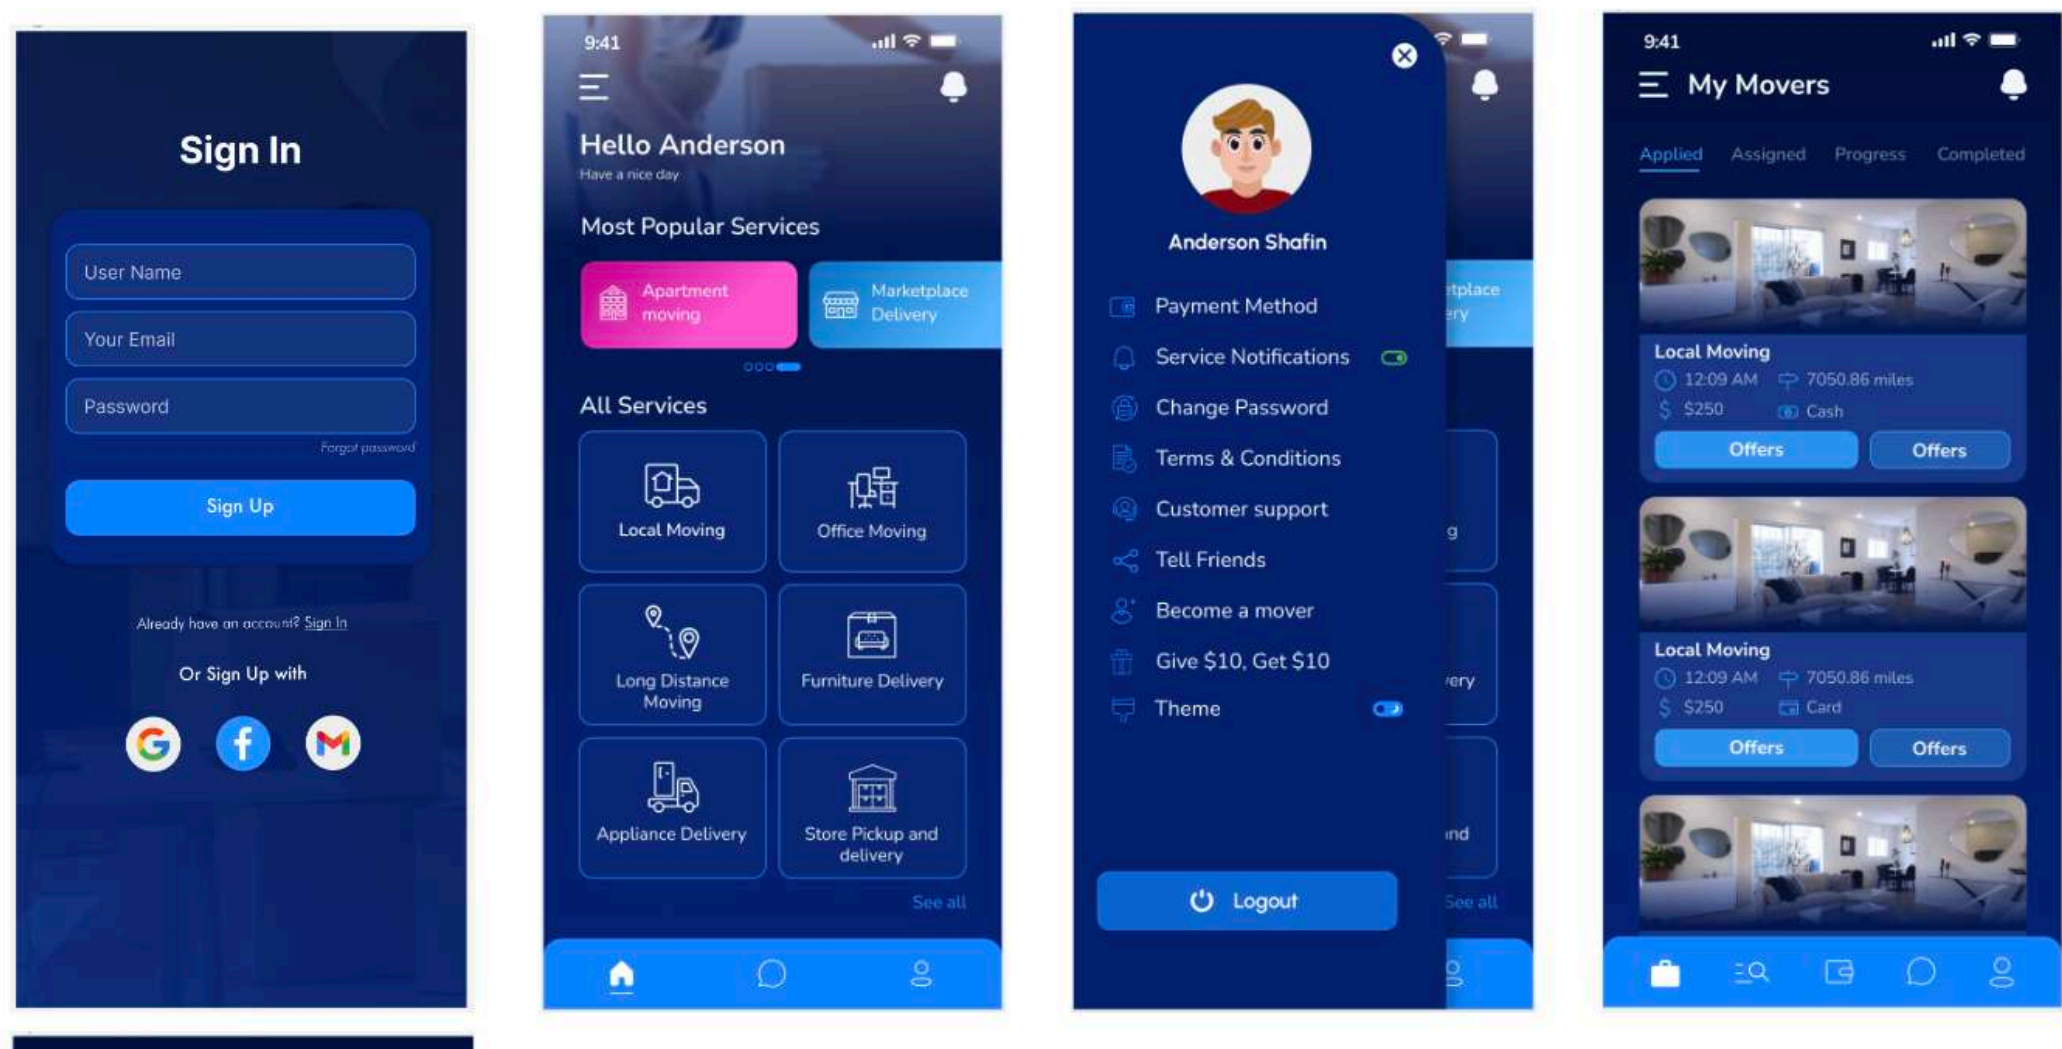

Handled product delivery focused on smooth ordering flow, usability, and real-world convenience.

Technologies

Ordering UX | Delivery workflow | Mobile commerce

No shareable screenshot included due to project-sharing restrictions.

User App

Project Summary

Easymove is a moving and delivery app for apartment moving, furniture delivery, and on-demand logistics. It connects users with local helpers and trucks, supports flat-cost negotiation, and simplifies same-day moving and delivery tasks.

Role

Handled mobile product implementation for move requests, helper discovery, negotiation flow, and logistics-oriented app experience.

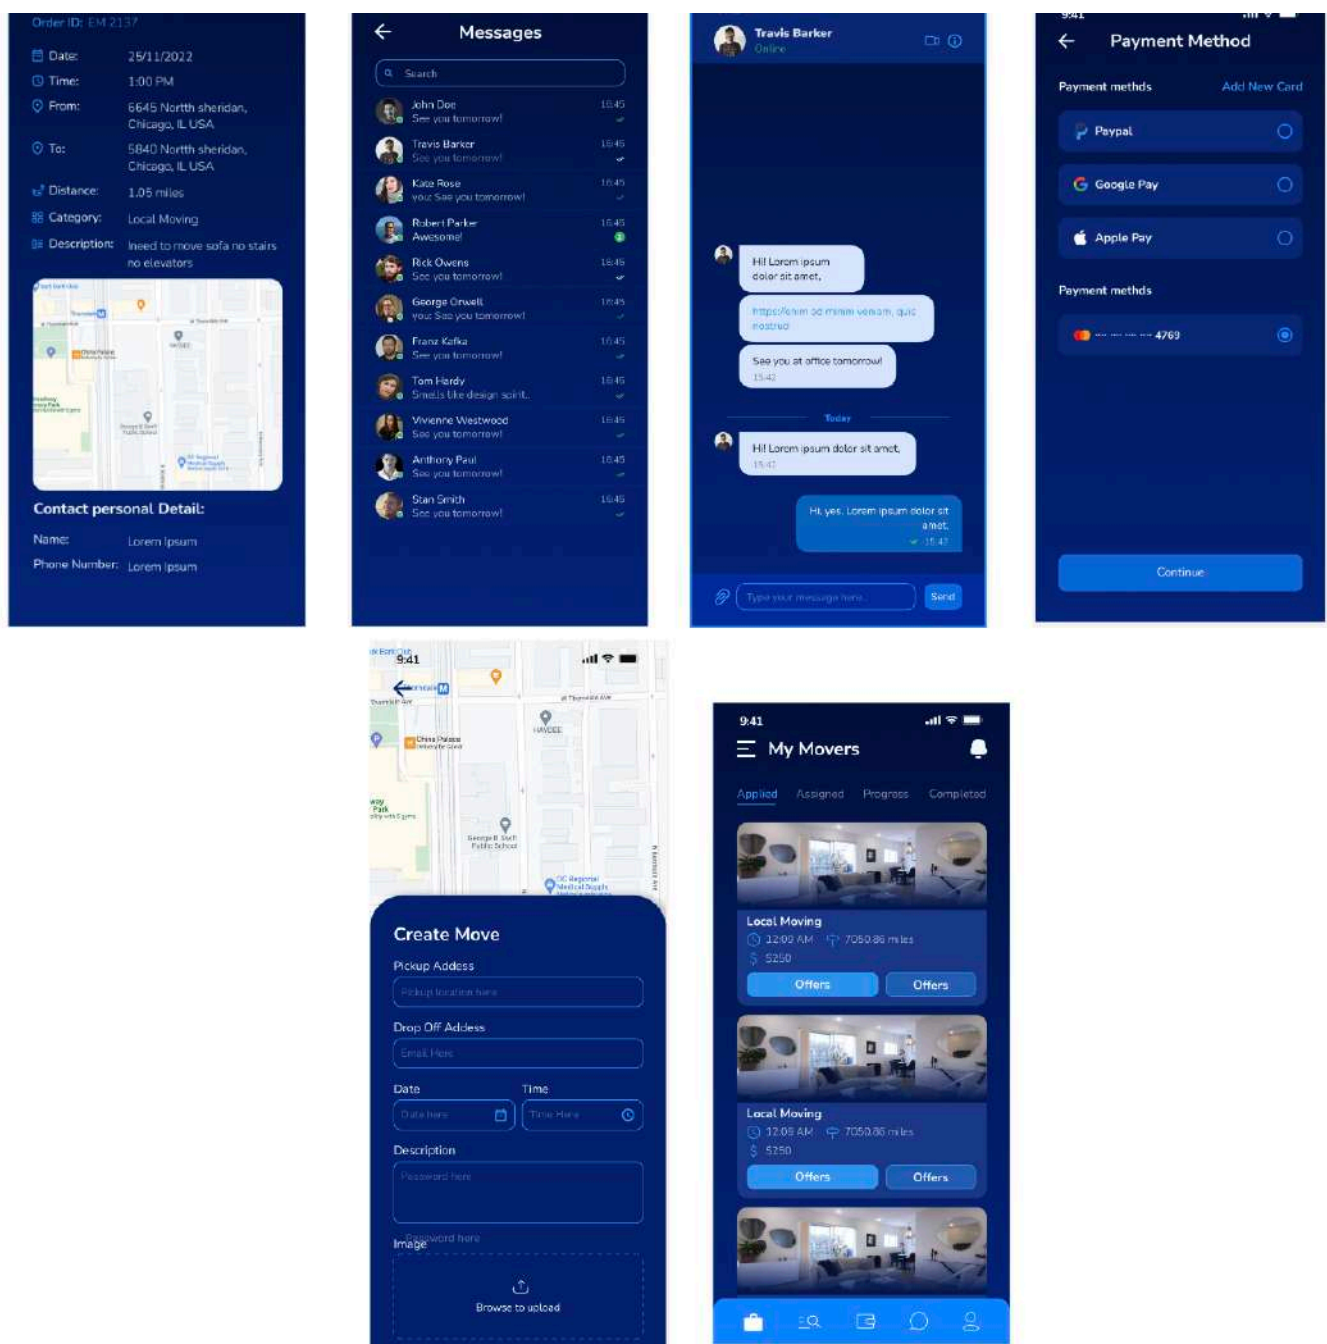

Technologies

On-demand workflow | Service marketplace UX | Real-time logistics flow | Customer app screens

EasyMove - Messaging and Payments

Page 10 of 16

On-Demand / Operations • Android and iOS product handled

Project Summary

This part of Easymove showcases service operations including chat, order coordination, payment methods, and request lifecycle handling across customer and operational screens.

Role

Handled mobile workflows around service coordination, communication, and payments for the broader Easymove product.

Technologies

Messaging UX | Payment flow | Service management | Operational dashboards

Correct image mapped for this case study where a shareable asset was available.

No public screenshot included

Relevant public screenshot is not available in the shared assets, so this project is documented as a text case study.

Project Summary

A zero-trust cybersecurity solution that supports domain-based administration and analytics-rich dashboards. The product visualizes PAM login stats, recent exploits, iOS searches, reported incidents, top attacker IPs, email security metrics, and related operational intelligence.

Role

Handled mobile delivery, business communication, requirements translation, and product implementation for security-focused reporting and administration flows.

Technologies

Kotlin | MVVM | Firebase | Jetpack Navigation | LiveData | Push Notifications | MP Chart

Relevant public screenshot is not available in the shared assets, so this project is documented as a text case study.

No public screenshot included
No approved screenshot is included in the current shared assets.

Project Summary

BP Better helps BP businesses and stations stay informed with notifications, weekly franchise communications, calendars, promotional assets, offer details, training materials, and business updates through a customized mobile experience.

Role

Handled mobile product support and delivery, working closely with business stakeholders to understand requirements and resolve issues efficiently.

Technologies

Kotlin / iOS delivery support | Custom WebViews | Push Notifications | Enterprise communications

No approved screenshot is included in the current shared assets.

No public screenshot included

Relevant public screenshot is not available in the shared assets, so this project is documented as a text case study.

Project Summary

A zero-trust network access product where users manage their domain-based network and admins manage users and activity. The product supports secure registration, login, admin-controlled authentication enforcement, web login approvals, QR-based login, biometrics, OTP, SMS, YubiKey, and NFC U2F workflows.

Role

Handled mobile implementation and delivery for secure authentication, access approval, and network user experience with close collaboration across client and business teams.

Technologies

Kotlin | MVVM | Hilt | Firebase | Push Notifications | Biometrics | OTP | SMS | YubiKey | NFC U2F

Relevant public screenshot is not available in the shared assets, so this project is documented as a text case study.

No public screenshot included
No approved image is included in the provided shared assets.

Project Summary

7Speaking supports language learning across English, German, Spanish, French, and Italian, with microlearning, social learning, group lessons, elearning, video chat, and personalized activities based on user level and professional needs.

Role

Handled requirement understanding and mobile delivery support for content-driven language learning experiences.

Technologies

Java | Firebase | Custom WebViews | Push Notifications | Learning content delivery

No approved image is included in the provided shared assets.

No public screenshot included
Screenshot is not included due to sharing restrictions.

Project Summary

InvoChat is a secure workplace communication product positioned as an alternative to platforms like Slack. It supports private team communication, collaboration, task management, and real-time progress visibility.

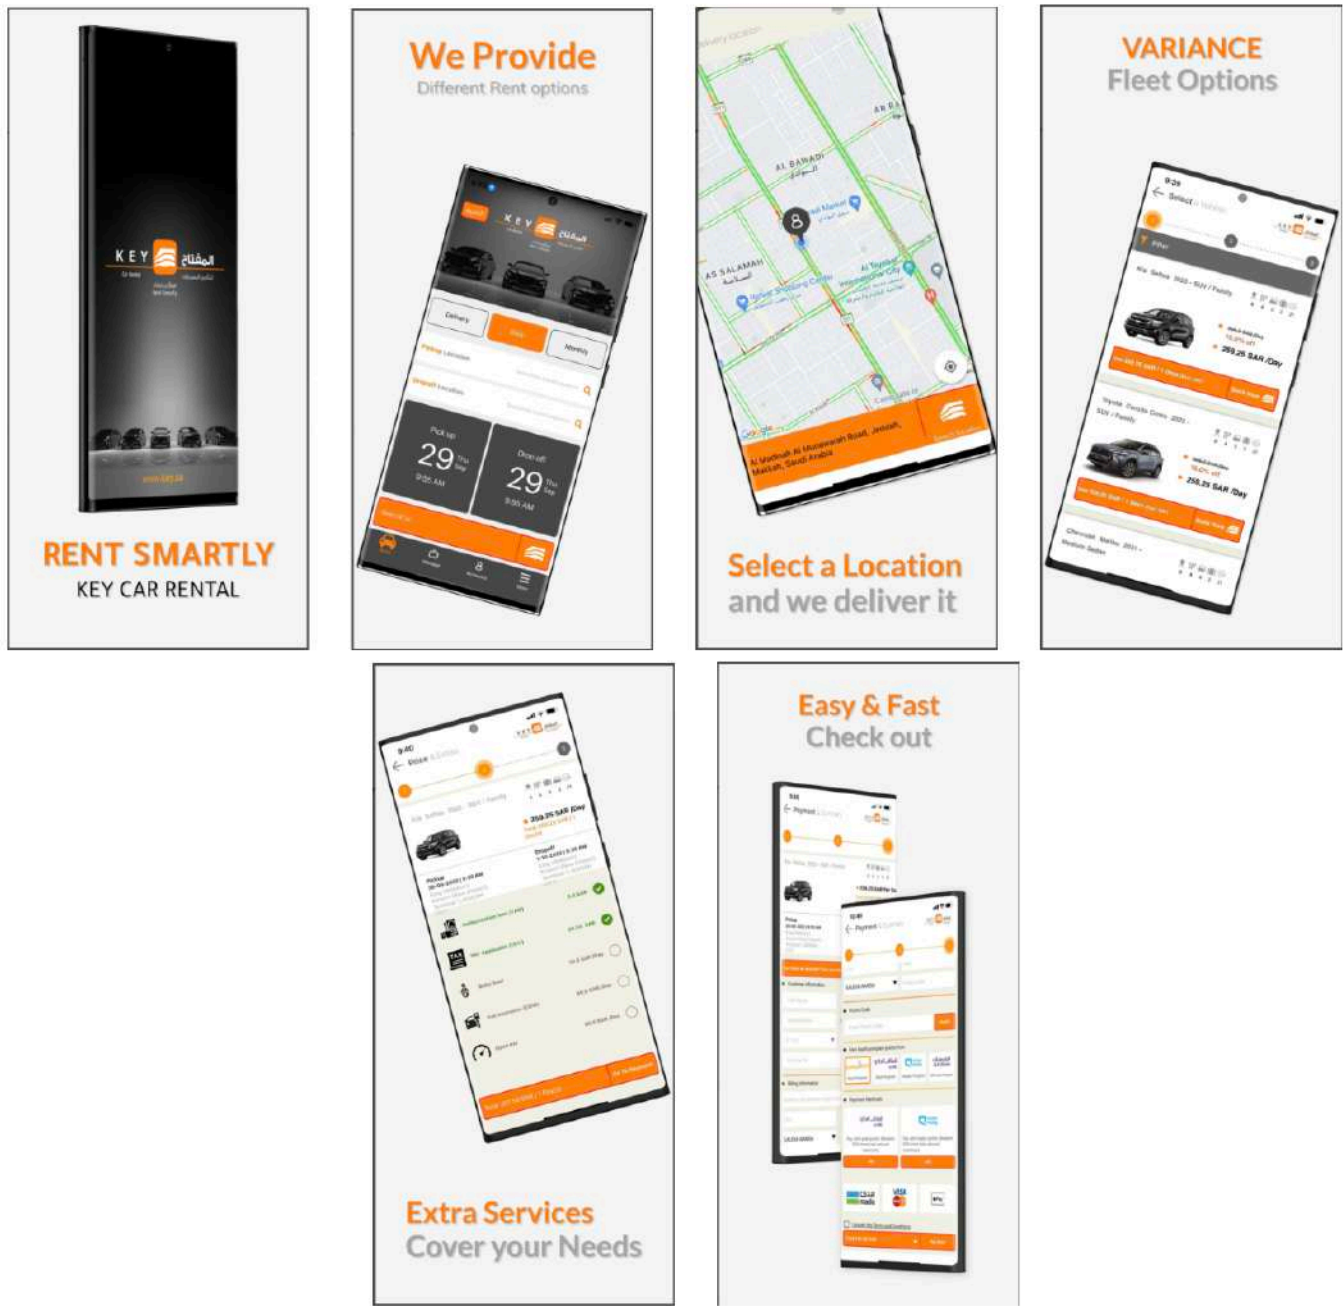

Role

Led mobile-side contribution for real-time communication experience, feature implementation, and overall Android product success while aligning technical delivery with business goals.

Technologies

Kotlin | MVVM | Firebase | Push Notifications | Realtime collaboration flows

Screenshot is not included due to sharing restrictions.

Project Summary

A car booking app that simplifies travel for work, airport, and day-to-day transport needs. The product helps users book quickly, reduce parking and taxi hassle, and improve mobility with a simpler rental flow.

Role

Contributed to mobile delivery under senior team guidance and supported key booking-related features.

Technologies

Java | SQLite | Firebase | Google Maps | Push Notifications | Payment Gateways
